

Integration Document

Introduction

This guide will show you how to configure PayUmoney as your payment processor on DrupalCommerce for payments through Credit Card, Debit Card, Net banking and Saved Cards. This plugin is compatible with DrupalCommerce version 7.x

Note: Always keep a backup of your existing Drupal Commerce installation including Mysql Database, before installing a new module.

Install PayUmoney Module

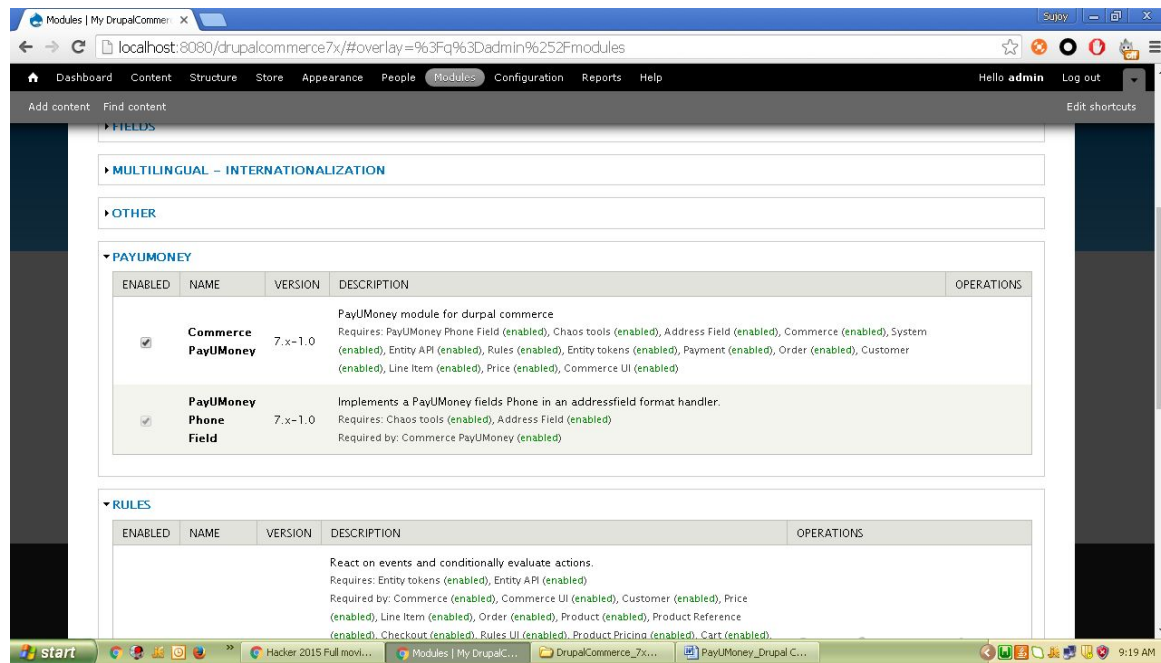

To install the PayUmoney Module for Drupal Commerce, copy the 'payumoney' folder from the zip file downloaded and paste/upload it to the following folder location:

<Drupal Commerce root>\ sites\all\modules\commerce\modules\payment\modules

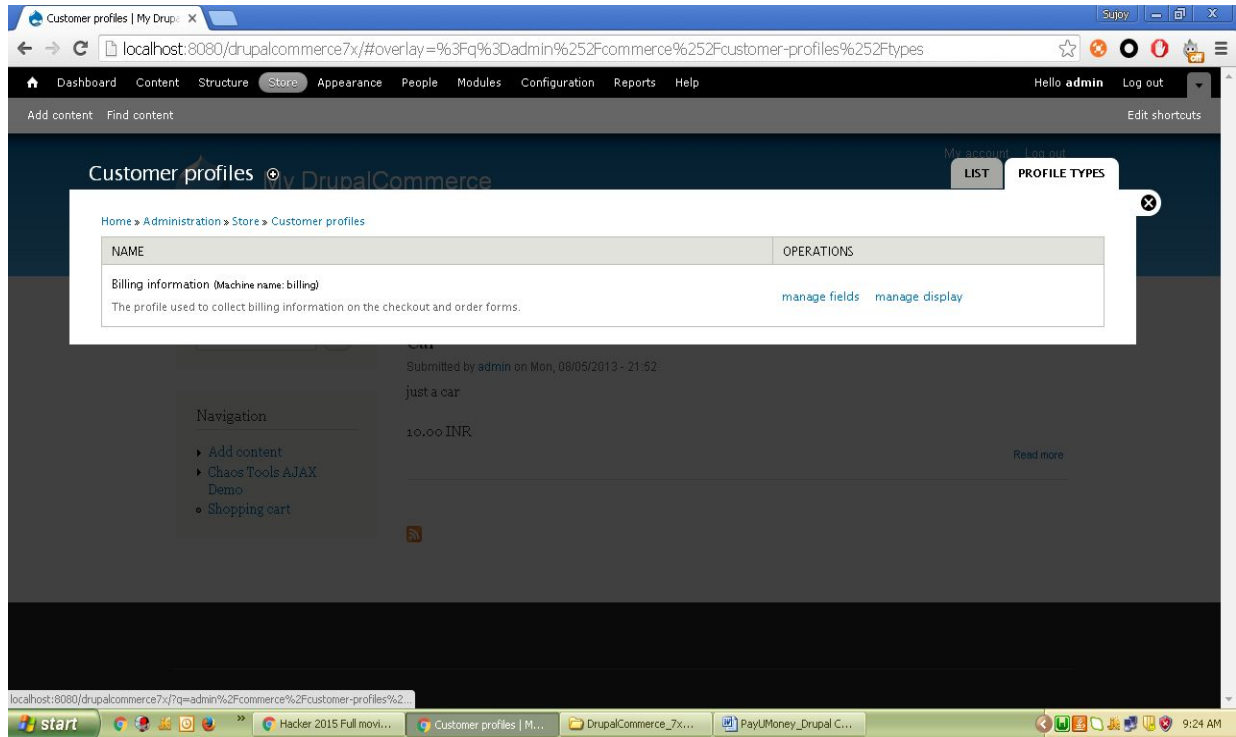

You are now good with the installation. Please proceed to configure the module to start collecting the Payment.

Configure PayUmoney Module

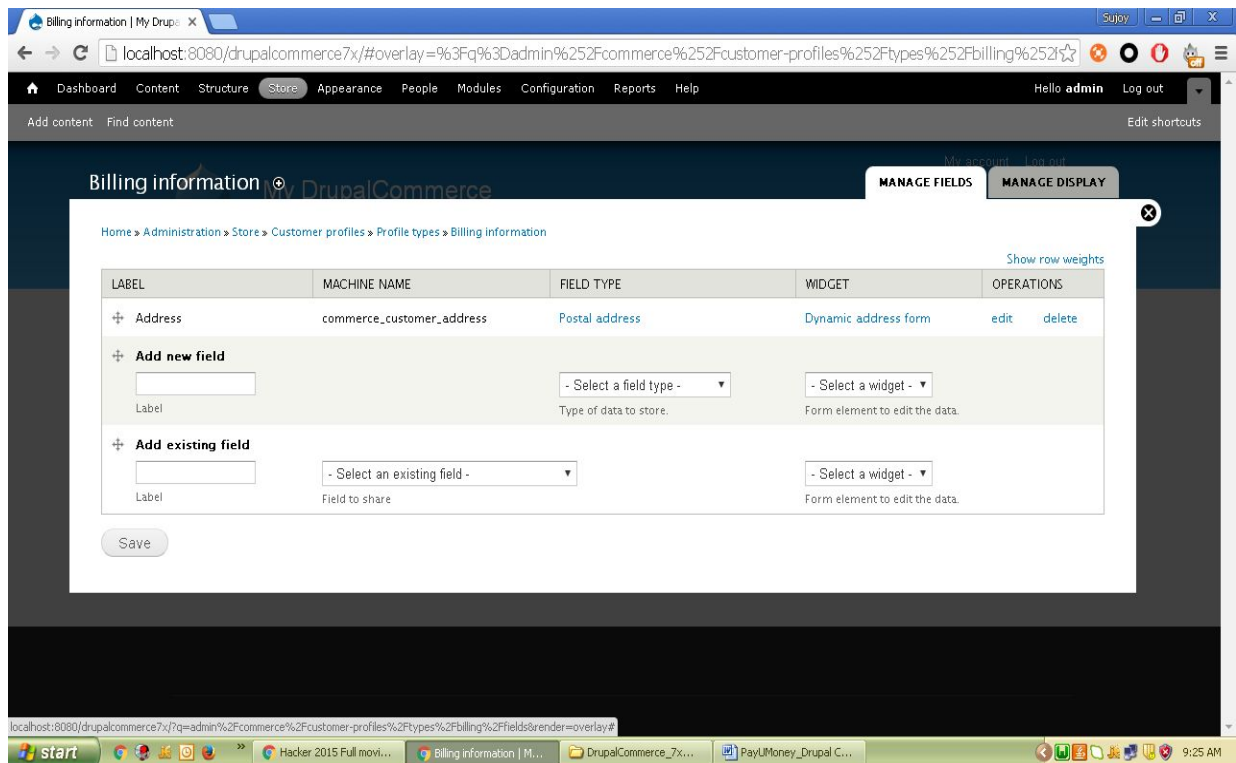

1. Login to Drupal Commerce admin and select **Modules**. Choose '**PAYUMONEY**' block and enable the two plugins listed under it ie **Commerce PayUmoney** & **PayUmoney Phone Field**.

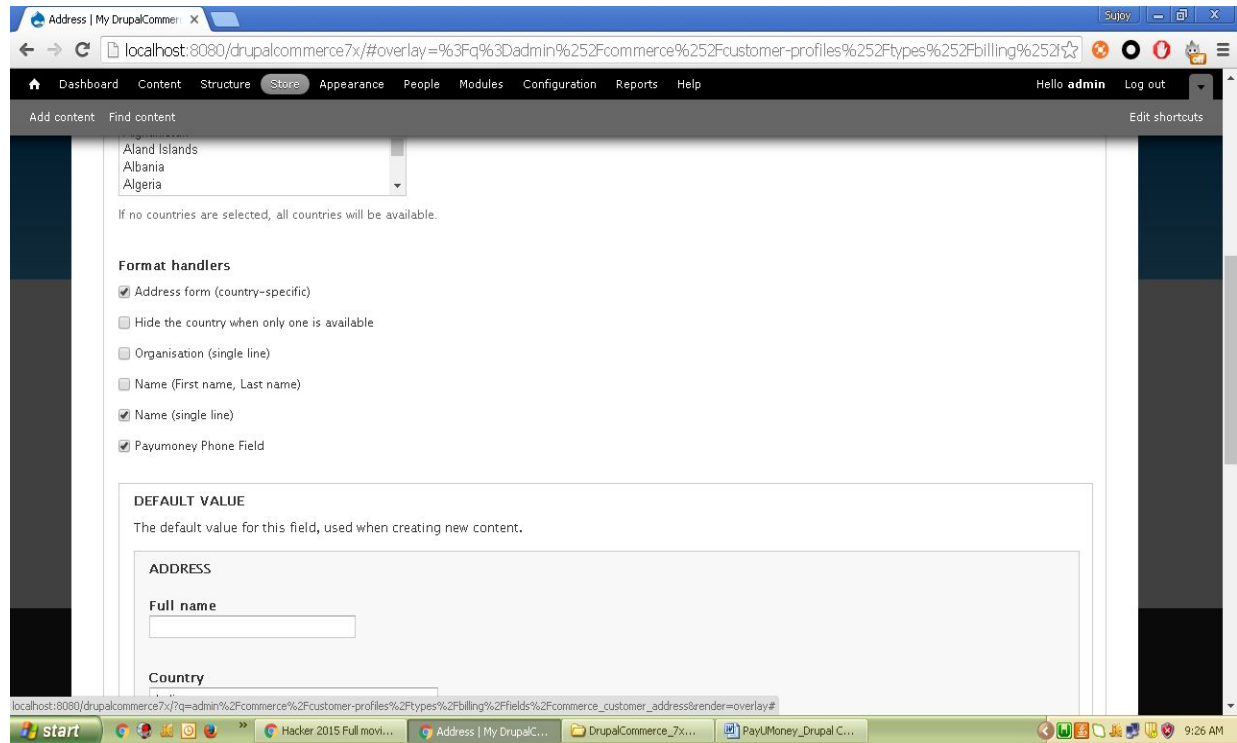

- To Include **Phone field** (Customer's phone number) in the PayUmoney Checkout page - Choose '**Store->Customer Profiles->Profile Types**'.

- Click on '**Manage Fields**' option.

4. Click on **edit** against **Address** entry in the first row.

5. Enable '**Payumoney Phone Field**' under Format handlers and **save** the configuration.

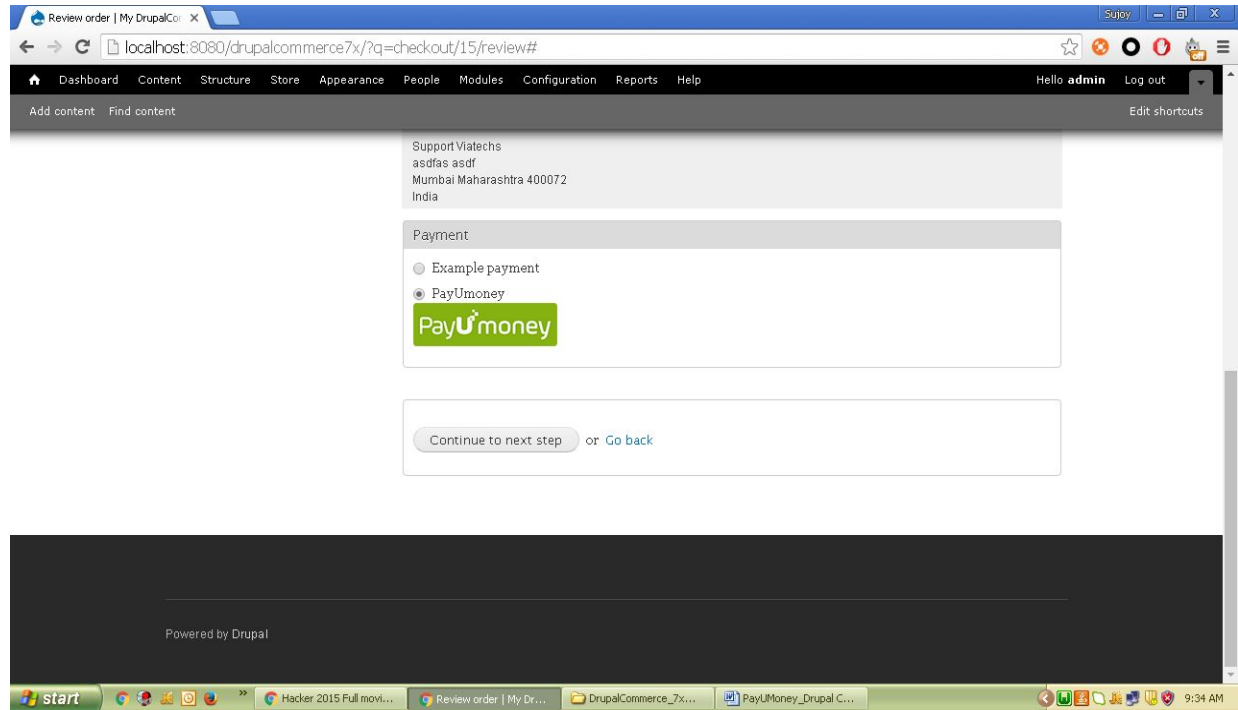

6. Goto: **Store->Configuration->Payment Methods->PayUmoney** and then **Edit** or choose **Actions->Edit**.

The screenshot shows a web browser window displaying the configuration page for the PayUmoney payment method in Drupal Commerce. The browser's address bar shows the URL: `localhost:8080/drupalcommerce7x/?q=checkout/15#overlay=%3Fq%3Dadmin%252Fcommerce%252Fconfig%252Fpayment-methods%252Fpayumoney`. The page has a dark blue header with navigation links: Dashboard, Content, Structure, Store, Appearance, People, Modules, Configuration, Reports, and Help. The user is logged in as 'admin'. The main content area is titled 'Editing action "Enable paym...' and contains two sections. The first section, 'Data types', has a dropdown menu set to 'Commerce Order' and a 'DATA SELECTORS' button. The second section, 'PAYMENT SETTINGS', contains three input fields: 'Merchant Key', 'Merchant Salt', and 'Base URI'. The 'Base URI' section has two radio buttons: 'Test' (selected) and 'Production'. A 'Save' button is located at the bottom of the settings section. The browser's taskbar at the bottom shows several open applications, including 'Hacker 2015 Full movi...', 'Editing action "Enable...', 'DrupalCommerce_7x...', and 'PayUMoney_Drupal C...'. The system clock shows 9:32 AM.

7. Enter **Merchant Key**, **Merchant Salt**. The values of key and salt are available in your Payumoney merchant dashboard. Also, choose between **Test** or **Production** mode by changing the Base URI and **Save** configuration.

Note: It is recommended that you choose **Test** mode initially and do an end to end testing of all Payment flows. Once you are done with Testing change the **Base URI** to **Production** to go live and start collecting real payments from your customers.

8. By now the PayUmoney module is installed and if basic Drupal Commerce configuration is done then checkout will be displayed to at shop front as shown in the sample screenshot below.

Testing

If you want to test the payment first, you should obtain test values for "Merchant Key" and "Salt" (not production) and enable checkbox "Enable PayU Test mode)".

Test MID: 4934580

Test Key: rjQUPktU

Test Salt: e5ilg1jwi8

Test Authorization Header: y8tNAC1Ar0Sd8xAHGjZ817UGto5jt37zLJSX/NHK3ok=

Below are the test card details for doing a test transaction in the testing mode. You may use the following card details for testing:

Card Name: Any Name

Card Number: 5123 4567 8901 2346 CVV: 123

Expiry Date: 12/2017
